

# Wireless WAN (WWAN)

Reduce your wireless costs and improve visibility with specialized automation and optimization focused on 5G / 4G LTE technology.

Deliver your enterprise network across all your remote locations with reliable, flexible, and cost-efficient wireless Wide Area Network (WAN) technology. Using real-time data, Network Management System (NMS) integrations, and a powerful logic engine, Advantage expertly removes your “cost of network insurance” while avoiding large overage risk.

“I enjoy the automation of our corporate on and offboarding of wireless services for our employees and the reporting to gain visibility into optimization opportunities.”

— **Mike F.**, Senior Directory, Workplace, and End User Computing

## Maximized Savings

Identify and leverage unbilled usage, ensuring you only pay for the services you use while optimizing your network capacity and cost-efficiency.

## Boosted Value with Scalability

Accommodate future growth without compromising on network performance or security with wireless WAN optimization solutions designed to scale with your business needs.

## Expert Contract Negotiations

Secure the best possible terms and conditions for your wireless WAN contracts with our experienced team of negotiators work diligently to ensure you achieve maximum value and long-term savings.

## Location-Based Reporting

Receive detailed, real-time insights into the location and status of your devices. Monitor and manage your assets more effectively and ensure optimal utilization and timely device adjustments so you can reduce energy consumption and improve overall performance.

## Customizable Solutions

Work closely with our experts to develop tailored wireless WAN optimization solutions that address your specific business challenges and objectives.

## Comprehensive Inventory Visibility

Get complete visibility into your device inventory, including location, phone line attachments, SIM (ICCID) information, service statuses, and plan details.
